Project Map

Create Database

Using Postgres, make a database called 'country_db'. Create tables for each country that contains the columns for each of the columns in the CSV files

Gather & Clean Data

Observe and clean data: Is it accurate? Are there any irregularities/unusable pieces of data?

Extraction, Transform

Observe and clean data: Is it accurate? Are there any irregularities/unusable pieces of data?

Prepare for Analysis

Write questions on that should we would like to answer. These questions will be answered by filtring the data in Postgres.

Load & Join Tables

Using Postgres, make a database called 'country_db'. Create tables for each country that contains the columns for each of the columns in the CSV files

Analysis

Write up a report to answer questions about the data and give analysis on any trends from the countries observed.
